Credit Highlights

Overview

| Key Strengths | Key Risks |
|--|---|
| Almost all income from relatively predictable and regulated earnings, thanks to supportive regulatory frameworks in the Netherlands and Germany. | Pressure on profitability, owing to regulatory period resets and ongoing funding needs that weigh on credit metrics. |
| Significant growth prospects, owing to the large investment program that will increase the regulatory asset base (RAB). | Very large capital expenditure (capex) tied to the network development plan (NDP) with limited flexibility, requiring significant financing and ongoing equity contributions. |
| Moderately high likelihood of support from the Dutch government in times of distress. | Material negative free cash flow after capex and dividends. |

Two supportive regulatory frameworks support TenneT's business profile. TenneT is the sole electricity transmission system operator (TSO) in the Netherlands and one of four TSOs in Germany (alongside Amprion, 50Hertz/Eurogrid, and TransnetBW). Like the other TSOs, TenneT benefits from stable, five-year regulatory periods with well-defined and transparent conditions. The regulatory frameworks provide virtually full coverage of costs and protection against volume and commodity risk. However, regulatory remuneration reduces in 2019 following the regulatory period reset in Germany, which will weigh on group profitability because about 75% of TenneT's income stems from Germany. Also, the gradual reduction in weighted-average cost of capital WACC (WACC) allowance inherent in the Dutch regulatory framework is exerting pressure on Dutch regulated earnings. The current regulatory periods for the Netherlands and Germany will end in 2021 and 2023, respectively.

Significant capex requirements will increase risks over the next decade. To help facilitate Europe's energy transition, TenneT is making significant investments in its role as TSO under the NDP, which has been upped in 2019 to around €35 billion (from €28 billion in 2018) over the next 10 years. TenneT's capex program is mainly related to offshore wind farm connections and Germany's underground North-South onshore grid. Consequently, we expect TenneT will expand faster than its peers, and face higher operational and financing risks over that period. TenneT has limited financial flexibility in terms of timing and the size of cash investment outflows. That said, we view it as positive that almost all of the German capex (65% of the total, the remainder being in the Netherlands) are "investment measures" that allow gas and electricity TSOs to increase the revenue cap under the German regulatory framework to account for full coverage of growth and extraordinary expenditures--investments that are deemed necessary for the energy transition in Germany, grid stability, and the international integration of the German network. Further, the company

benefits from frequent issuance of hybrid and green bonds, and its ongoing financing needs are partly compensated by equity contributions from the Dutch government.

Ongoing and expected support from the Dutch government underpins our ratings on TenneT. We believe the Dutch government would provide timely and sufficient extraordinary support to TenneT in the event of financial distress, given its 100% ownership of TenneT and the company's standing as part of critical European and Dutch power system infrastructure. TenneT receives ongoing support from the government through a lower dividend payout than for peers and equity contributions to finance projects totaling about €1.2 billion over 2017-2020 (about €500 million received in 2017 and 2018). The government's equity commitment is aimed at supporting TenneT's extensive investments in the Netherlands. In 2011 and 2012, TenneT received cumulative equity injections at the corporate level of about €600 million. In the light of the extensive capex program in the Netherlands we expect equity contributions to continue after 2020.

Outlook: Stable

Our outlook on Netherlands-based power grid operator TenneT is stable because we expect operating conditions for power transmission in Netherlands and Germany won't change in the coming years. In particular, in our base-case scenario, we assume that TenneT's direct owner, the Dutch Ministry of Finance, would consent to lower dividends to mitigate an unexpected increase in the company's already high leverage. Overall, we continue to see a moderately high likelihood of TenneT receiving extraordinary support from the Dutch government in the event of financial distress. Our assessment of TenneT's stand-alone credit profile (SACP) also takes into account the government's ongoing support, such as ongoing capital contributions.

We assume that TenneT's large planned investments and lower regulated returns will weaken its credit metrics in the coming years. However, we expect they will remain commensurate with the ratings, notably with funds from operations (FFO) to debt sustainably above 6%. FFO to debt was 12.2% at year-end 2018 and we expect it to decline to about 11% by year-end 2019.

Downside scenario

We could lower the ratings if TenneT's SACP deteriorates to 'bbb-' or lower. This could result from adverse changes to either regulatory framework that materially affected the stability of TenneT's cash flows or profitability.

We would also downgrade TenneT if the S&P Global Ratings-adjusted ratio of FFO to debt declines and stays below 6%. This could occur if, for example, TenneT's capex increases further, without offsetting measures, or if there are unexpected delays or cost overruns on existing projects that are not covered by regulated tariffs.

If the Dutch government seems less likely to support TenneT, we could lower the rating on the company. However, a one-notch downgrade of the Netherlands would not trigger a downgrade of TenneT if TenneT's stand-alone credit quality doesn't weaken.

Upside scenario

We see the likelihood of an upgrade as remote in light of TenneT's extensive investment program, which will lead to a material increase in debt by 2020 and weaken debt coverage ratios over the medium term. That said, we would consider revising the SACP upward if TenneT demonstrates that it can sustain adjusted FFO to debt of more than 10%, while maintaining negative FOCF to debt no lower than 10%, assuming its business risk doesn't increase.

We would also consider upgrading TenneT, assuming an unchanged SACP, if we believed that the likelihood of extraordinary support from the Dutch government had materially strengthened, although we consider this unlikely in the near term because of the high proportion of TenneT's capex in Germany.

Our Base-Case Scenario

| Assumptions | Key Metrics | | | |
|---|------------------|--------------|--------------|----------|
| <ul style="list-style-type: none"> Gradual weakening of financial metrics due to reduced regulatory returns on investments in Germany from 2019 and due to gradually reducing WACC allowance in The Netherlands. German regulated: Return on equity (ROE) of 5.12% (assets commissioned before January 2006) and 6.91% (new assets). Sectoral efficiency factor (Xgen; productivity target) of 0.9% for the five-year regulatory period starting 2018. Dutch regulated: Regulated expected capital cost allowance (real pre-tax WACC) gradually decreasing to 2.8% in 2021 from 4.5% in 2016 for existing capital; gradually decreasing to 2.8% from 3.8% over the same period for new investments. A steady rise in revenue as investments in the Netherlands and Germany increase the RAB. We assume about €10 billion of capex over 2019-2021, about two-thirds of this in Germany, and about 35% of total capex in off-shore connections. Minimum €700 million of equity contributions from the Dutch government in 2019-2020. A dividend payout ratio of 35% of the underlying distributable profit, after income allocated to project investors and distributions to hybrid capital holders. Significant negative cash flow after capex and dividends over the coming two years of -€1.6 billion to -€2.2 billion. | 2018A | 2019E | 2020E | |
| | EBITDA (bil. €)* | 1.7 | N.A. | N.A. |
| | FFO/Debt (%)* | 12.2 | 10.5-12.5 | 9.5-11.5 |
| | FOCF/Debt (%)* | (9.8) | ~(15.0) | ~(17.0) |
| <p>A--Actual. E--Estimate. FFO--Funds from operations. FOCF--Free operating cash flow. N.A.--Not available. *S&P Global Ratings adjusted figures.</p> | | | | |

Base-case projections

Lower cost of debt will weigh on remuneration and profitability. We expect the regulatory remuneration in Germany to decline for the power transmission regulatory period starting in 2019. The German regulator Bundesnetzagentur (BNetzA) has reduced the return on equity (ROE) allowance by about 200 basis points, mainly due to lower reference interest rate and the reduction of the risk premium. BNetzA has issued its sectoral efficiency target (xgen) at 0.9% from 1.5% previously, reducing the productivity an efficient (xind = 100%) TSO is expected to achieve over the five-year regulatory period 2019-2023. German TenneT is assessed to have 99.9% xind efficiency score.

The large capex program, while fueling growth, will also put TenneT's credit metrics under pressure. TenneT has embarked on an aggressive capex plan that it aims to execute over the next 10 years to cope with renewable energy dynamics in Germany and the Netherlands. Although this will enable the company to expand faster than its peers, we believe it will result in negative free operating cash flow in each year of our forecast, thus increasing the company's financing needs. This translates into a gradual deterioration of the company's credit metrics, which we nonetheless believe will remain consistent with the current rating.

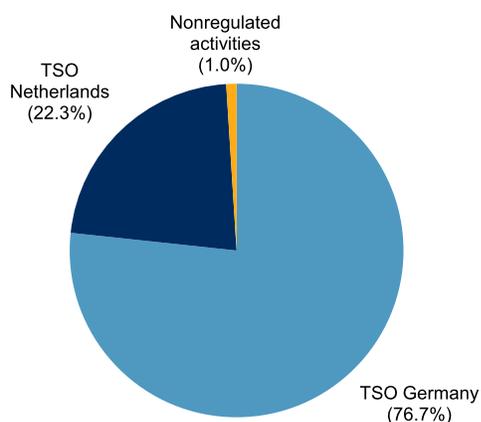

Lower regulatory allowance in German offshore operations is adding pressure. Further pressure on TenneT's financial metrics is coming from a change in the remuneration calculation in Germany. As of 2019 (moved from the scheduled start in 2018), German offshore operating expenditure (opex) will be remunerated at actual cost compared with a lump-sum allowance of 3.4% previously. Furthermore, the German regulator has reduced the opex lump sum to 0.2% from 0.8% during the construction of onshore wind investment measures (remaining at 0.8% for the post-construction phase). Both effects reduce German regulated utilities' ability to outperform cost allowance.

Company Description

TenneT is a leading European electricity TSO serving 41 million end users in the Netherlands and Germany through about 22,900 kilometers (km) of high voltage transmission lines. As such, the company's activities are under the oversight of the regulatory authorities in each jurisdiction, the Autoriteit Consument & Markt in the Netherlands and Bundesnetzagentur (BNetzA) in Germany. The company generates annual turnover of about €4 billion and EBITDA of €1.5 billion (about 75% in Germany); its asset book value totals €21.8 billion. TenneT is involved in limited non-regulated activities (about 5%) through its 50% stake in BritNed, a merchant cable operator (Anglo-Dutch interconnector), 17% stake in EPEX, a North West European electricity exchange, and 100% stake in Relined and NOVEC, two telecommunication infrastructure companies.

Business Risk: Excellent

TenneT's business risk profile is supported by its position as The Netherlands' only electricity TSO and Germany's largest electricity TSO. The company generates the bulk of its revenues under the German and Dutch regulatory regimes, which we view as supportive. TenneT is exposed to higher execution risks than other TSOs, due to its very large capex plan, especially in Germany, where the rapid growth of renewable energy necessitates significant investments in the onshore and offshore grids, creating a range of new challenges and risks. Over the next 10 years, TenneT expects to invest €35 billion in onshore and offshore grid infrastructure in both countries. These risks are partly offset by TenneT's good operating performance and track record so far.

In our view, the regulatory frameworks in the Netherlands and Germany provide TSOs with a strong regulatory advantage. Electricity operators benefit from the regulators' solid track record of stability and five-year regulatory periods with well-defined and transparent conditions, which makes for relatively predictable financial performance. The regulatory framework provides virtually full coverage of costs and protection against volume and commodity risk (see "Why We See Germany's Electricity And Gas Regulatory Framework As Supportive," published on Nov. 21, 2016, and "Why Do We View The Dutch Electricity And Gas Networks Regulatory Framework As Supportive?," published March 2, 2016, for more information).

Peer comparison

We compare TenneT with other TSOs in Europe. Unlike most of its peers, TenneT operates in two countries, Germany and the Netherlands, which brings some diversification to regulatory reset risk, but also some additional complexity. The key difference between TenneT and most of its European peers is its large capex program, which results in highly negative FOCF to debt and discretionary cash-flow-to-debt ratios. Consequently, we view TenneT's financial risk profile as weaker.

Nevertheless, TenneT benefits from a few strengths that its European TSO peers do not share, in particular a lower dividend payout (35%) and ongoing support from its related government. For example, TenneT benefits from a €1.2 billion equity contribution from the Dutch government over 2017-2020.

| Discretionary cash flow/debt (%) | (13.5) | 7.4 | (8.2) | (21.3) |

Financial Risk: Aggressive

TenneT's financial risk profile is supported by relatively predictable regulated cash flows. However, substantial investments result in high debt, which we expect will increase over the next 10 years. Although we believe that this high capex creates some operating risks and limits financial flexibility, we understand that it will be remunerated because it is part of TenneT's regulated activity. There is some volatility of cash flow metrics embedded in the regulatory framework, owing to delayed recovery of unexpected costs (such as for congestion-management measures); however, we view this as a working capital issue rather than a credit risk.

Chart 3

TenneT Capex Historical Evolution

FOCF--Free operating cash flow. Sources: Annual reports, S&P Global Ratings.
Copyright © 2019 by Standard & Poor's Financial Services LLC. All rights reserved.

We expect TenneT's credit metrics will weaken in the coming years, but allow sufficient headroom at the current SACP level. In particular, we expect adjusted FFO to debt to decline to below 11% in 2020 from about 13% at year-end 2018, and debt to increase by more than €1 billion annually. The forecast decline is mainly due to the continuation and recent expansion of the investment program as per the German and Dutch NDP, combined with lower regulatory remuneration, specifically in Germany.

Liquidity: Adequate

We consider TenneT's liquidity to be adequate for the next 12 months. As of March 31, 2019, we expect that the company's sources of liquidity will exceed uses by more than 1.1x over this period.

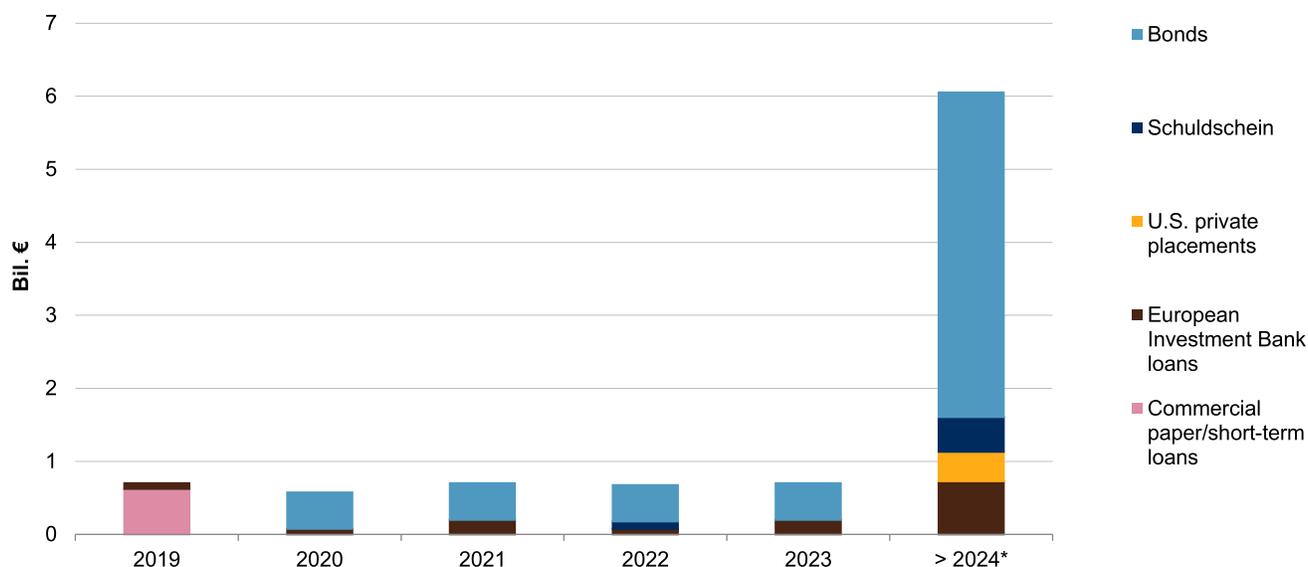

We understand that there are no restrictive covenants in the documentation for the group's debt.

| Principal Liquidity Sources | Principal Liquidity Uses |
|--|--|
| <ul style="list-style-type: none"> Unrestricted cash of about €34 million. Available undrawn committed bank facilities of €2.2 billion maturing in July 2021 and a €350 million European Investment Bank facility available for at least the coming 12 months. | <ul style="list-style-type: none"> €693 million in debt maturing over the next 12 months. Capex of €3.0 billion. Dividend payments based on a 35% payout ratio. |

Debt maturities

Other Credit Considerations

We base our view of a moderately high likelihood of government support for TenneT on our assessment of the company's:

- Important role for the Dutch government, given its strategic importance for the domestic energy sectors as the monopoly owner and operator of the Dutch electricity TSO network. The ongoing equity contributions illustrate TenneT's importance for the Dutch government; and
- Strong link with the Netherlands, since TenneT is currently fully owned by the Dutch government and we believe it will likely remain majority state owned.

Our assessment of the likelihood of extraordinary support is lower for TenneT than for other European TSOs because of the increasing dominance of TenneT's German operations. We believe that the Dutch government could find it politically difficult to provide full and timely support to TenneT if it encounters financial difficulty due to problems in its German operations.

Environmental, Social, And Governance

TenneT has a solid track record managing its grid with high quality, security, and safety standards. We expect the company to continue ensuring constant security of supply despite greater operational complexity stemming from integrating more renewable capacity into its network. Greater use of digitalization and data platforms within its processes should help the group fulfill its key social role as TSO in both the Netherlands and Germany.

TenneT has significantly extended its capex program to adapt to ambitious energy transition targets in both countries (aggregate investments of €35 billion to be deployed by 2028: about 65% for German offshore and onshore; the remaining on Dutch offshore and onshore capacity integration). TenneT is one of the largest hybrid green bond issuers in Europe (€1.1 billion outstanding at year-end 2018).

Because TenneT's asset base is critical for both countries, it is under high regulatory and political scrutiny, reinforcing the need for strong governance. While the interests of TenneT's regulatory stakeholders are currently aligned and we view the sole owner, the Dutch Ministry of Finance, as supportive, if TenneT's stakeholders' interests diverge, there could be governance challenges.

Issue Ratings - Subordination Risk Analysis

Capital structure

TenneT is using hybrid capital to support its large investment program in Germany. We consider the rated €1.1 billion outstanding hybrids to have intermediate equity content.

TenneT is the biggest corporate issuer of green senior unsecured bonds in the Netherlands. In addition to its existing green bonds (€4.75 billion outstanding) issued to invest in green energy, TenneT successfully placed its first green hybrid benchmark bond in April 2017.

Analytical conclusions

TenneT's debt structure is within our guidelines for aligning the rating on senior unsecured debt with the 'A-' issuer credit rating (ICR). This is because all of outstanding debt is at the parent company level and there is no secured debt.

We arrive at our 'BB+' issue rating on the hybrid instruments by notching down from our 'bbb' SACP on TenneT. The two-notch difference stems from deducting:

- One notch for subordination because our long-term ICR and SACP assessment are investment grade (higher than 'BB+'); and
- An additional notch for payment flexibility, to reflect that the deferral of interest is optional.

| 15-Apr-2010 | A-/Stable/A-2 |
| 21-Jan-2010 | A-/Watch Neg/A-2 |

*Unless otherwise noted, all ratings in this report are global scale ratings. S&P Global Ratings' credit ratings on the global scale are comparable across countries. S&P Global Ratings' credit ratings on a national scale are relative to obligors or obligations within that specific country. Issue and debt ratings could include debt guaranteed by another entity, and rated debt that an entity guarantees.

No content (including ratings, credit-related analyses and data, valuations, model, software or other application or output therefrom) or any part thereof (Content) may be modified, reverse engineered, reproduced or distributed in any form by any means, or stored in a database or retrieval system, without the prior written permission of Standard & Poor's Financial Services LLC or its affiliates (collectively, S&P). The Content shall not be used for any unlawful or unauthorized purposes. S&P and any third-party providers, as well as their directors, officers, shareholders, employees or agents (collectively S&P Parties) do not guarantee the accuracy, completeness, timeliness or availability of the Content. S&P Parties are not responsible for any errors or omissions (negligent or otherwise), regardless of the cause, for the results obtained from the use of the Content, or for the security or maintenance of any data input by the user. The Content is provided on an "as is" basis. S&P PARTIES DISCLAIM ANY AND ALL EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE, FREEDOM FROM BUGS, SOFTWARE ERRORS OR DEFECTS, THAT THE CONTENT'S FUNCTIONING WILL BE UNINTERRUPTED OR THAT THE CONTENT WILL OPERATE WITH ANY SOFTWARE OR HARDWARE CONFIGURATION. In no event shall S&P Parties be liable to any party for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including, without limitation, lost income or lost profits and opportunity costs or losses caused by negligence) in connection with any use of the Content even if advised of the possibility of such damages.

Credit-related and other analyses, including ratings, and statements in the Content are statements of opinion as of the date they are expressed and not statements of fact. S&P's opinions, analyses and rating acknowledgment decisions (described below) are not recommendations to purchase, hold, or sell any securities or to make any investment decisions, and do not address the suitability of any security. S&P assumes no obligation to update the Content following publication in any form or format. The Content should not be relied on and is not a substitute for the skill, judgment and experience of the user, its management, employees, advisors and/or clients when making investment and other business decisions. S&P does not act as a fiduciary or an investment advisor except where registered as such. While S&P has obtained information from sources it believes to be reliable, S&P does not perform an audit and undertakes no duty of due diligence or independent verification of any information it receives. Rating-related publications may be published for a variety of reasons that are not necessarily dependent on action by rating committees, including, but not limited to, the publication of a periodic update on a credit rating and related analyses.

To the extent that regulatory authorities allow a rating agency to acknowledge in one jurisdiction a rating issued in another jurisdiction for certain regulatory purposes, S&P reserves the right to assign, withdraw or suspend such acknowledgment at any time and in its sole discretion. S&P Parties disclaim any duty whatsoever arising out of the assignment, withdrawal or suspension of an acknowledgment as well as any liability for any damage alleged to have been suffered on account thereof.

S&P keeps certain activities of its business units separate from each other in order to preserve the independence and objectivity of their respective activities. As a result, certain business units of S&P may have information that is not available to other S&P business units. S&P has established policies and procedures to maintain the confidentiality of certain non-public information received in connection with each analytical process.

S&P may receive compensation for its ratings and certain analyses, normally from issuers or underwriters of securities or from obligors. S&P reserves the right to disseminate its opinions and analyses. S&P's public ratings and analyses are made available on its Web sites, www.standardandpoors.com (free of charge), and www.ratingsdirect.com (subscription), and may be distributed through other means, including via S&P publications and third-party redistributors. Additional information about our ratings fees is available at www.standardandpoors.com/usratingsfees.
